

PING IDENTITY INCREASES PRODUCTIVITY WITH SECURITY-DRIVEN TESTING & MAINTENANCE

Testing

Software Development

Cloud Services

Ping Identity Ping Identity provides cloud-based identity management software that protects critical assets for various enterprises, while offering secure access to any application from any device. They help prevent security breaches, increase employee and partner activity, and provide personalized customer experiences for over half of the Fortune 100.

8+ year partnership with KMS

1-2 week team ramp up

26% increase in dev team's production

0 major bugs in production

Challenges:

- Evolving website products required significant testing across complex platforms
- Limited resources to maintain both the legacy platform and develop new products
- Strict regulations around data privacy and security
- Needed a dependable agile development team and process during substantial growth

KMS always has the ability to go with the ups and the downs, retaining core knowledge within the team. I feel confident in the work KMS is delivering, knowing that they won't drop the ball on our projects or replace our in-house teams. We trust their teams because they're dependable.

— Senior Director

KMS Impacts:

Achieved technology stack expertise and ramp-up to full productivity in just 1-2 weeks from onboarding, filling resource gaps and testing needs.

Maintained a steady, high-quality talent pool, standing out from other development partners with high attrition rates.

Developed legacy system enhancements to free up resources for developing next-gen applications.

Successfully integrated into Ping Identity team and full software development lifecycle, from the beginning of project requirement analysis to releases.
